INNOVATIVE THERAPY RESOURCE

The **Proaxis Therapy / EIM Orthopaedic Manual Physical Therapy Residency** is a planned program of post-professional clinical and didactic education for physical therapists designed to advance the physical therapist resident's preparation as a provider of patient care services in orthopaedic physical therapy.

The program combines opportunities for ongoing clinical supervision and mentoring, with a theoretical basis for advanced practice and scientific inquiry. The program is designed to facilitate the growth of practitioners as physical therapists skilled in orthopaedic physical therapy. We seek to produce highly skilled, autonomous practitioners who have substantially increased their ability to provide care to patients with musculoskeletal conditions. Graduates will have a strong base of knowledge of evidence-based practice, orthopaedic manual therapy techniques, advanced medical screening, and radiology. Graduates will be positioned to achieve the Orthopaedic Certified Specialist certification from the ABPTS and will be leaders in the orthopaedic physical therapy field.

The programs are an intensive combination of didactic and clinical education experiences using a combination of distance learning, on-line courses, weekend intensive hands-on courses, and clinical practice hours. EIM highly leverages distance learning and other technologies (online Grand Rounds, Author in the Room, discussions via MyPhysicalTherapySpace, etc.) to maximize the learning experience and collaboration with other EIM Residents/Fellows-in-Training throughout the country.

#### **tDPT Additional Requirements**

For Proaxis Therapy employees who are interested in also attaining a tDPT, the combined Residency and tDPT offers a unique method of obtaining both through one curriculum. 4 classes beyond those required for the Residency are all that are needed for DPT. Refer to the combined curriculum to see the additional coursework. Those in the tDPT curriculum will work as a cohort under the guidance of Regis University in connection with the Proaxis Therapy / EIM Orthopaedic Residency. This ability to gain multiple experiences and credit towards an OCS, a Residency, and a DPT all at once is unique to this program.
